

# MARS

## MVi Archive Retrieval System

**MARS is the Next Generation COLD product designed to bridge the gap between core reporting systems and your Laserfiche repository.**

In today's information society it is becoming more critical to turn electronic content into information assets. MARS allows application generated content such as reports, forms, invoices, statements etc., to be easily captured, converted and archived directly into the Laserfiche repository.

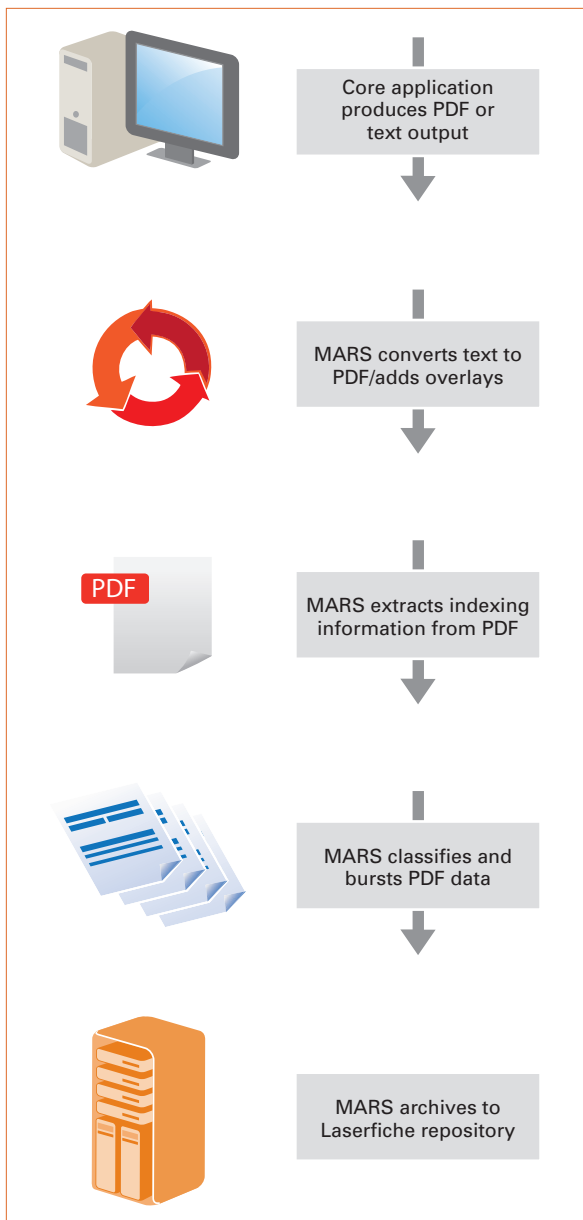

Automated configuration tools allow the end user to set up unattended processing of all electronic content and seamlessly import it into your Laserfiche repository. Graphical overlays can be created that enhance the look and feel of your documents as part of the user defined project setup.

MARS is also scalable and allows multiple projects to be setup and run concurrently. This important design feature accelerates processing in that a single project may be able to handle many different types of documents during the same process cycle.

MARS uses flexible definitions and regular expressions to enable pattern matching which allows the program to process multiple documents or forms and extract the requisite metadata required for the accurate indexing of archived documents.

Leverage the power of MARS and Laserfiche to turn your Enterprise data into Enterprise assets.

#### Product Specifications

##### INTEGRATION OPTIONS

- Accepts reports from multiple sources
- Stores reports in Laserfiche repository

##### REPORT CAPABILITY

- Process reports immediately
- Supports multiple text formats
- Stores unrecognized reports until re-processed with new criteria
- Archive Windows and Unix based reports
- Auto index based on pre-defined criteria

##### FOLDER AND REPORT FILE FEATURES

- Intuitive folder structure makes searches easy
- Supports folders within folders report organization

##### GENERAL FEATURES

- Graphical image overlay allows for different report formats
- Universally accepted PDF format

##### BENEFITS TO THE ENTERPRISE

- Reduction in paper costs
- Quieter environment
- Reduction in scanned items
- Improved lookup for archived reports
- Reduction in Reporting Errors
- Quicker research capabilities
- Improved Security
- Historical record look-up
- Integrated statements with burst capability

##### MINIMUM SYSTEM REQUIREMENTS

Dedicated or Virtual Server

2.4GHz or faster processor

4GB RAM Sufficient Free Hard Drive or SAN Capacity

Microsoft Windows Server 2003 or higher

(Supports either 32 or 64 bit OS)

Laserfiche release 7.2 or higher

### MARS Benefits

- MVi Archive-Retrieval System
- Designed for Laserfiche
- Automated Text to PDF Capture & Archiving
- Unattended Operation
- Core System Independence
- Flexible Archive Options
- Graphical Overlay Capability
- Supports Virtual Environments
- Simplified Configuration Tools
- Reduces Paper and Employee Expense
- Easily Searchable in Laserfiche
- Turns Reports into Enterprise Assets
